三、培养特色

III. Program Highlights

指导思想：鼓励和引导学生树立“追求卓越、致力创新、自主学习、主动实践”的学习理念，实行“厚基础、重实践、校企联动、发展个性”的培养理念。

通过校企联合培养、双导师制等强化工程实践和创新合作能力。在企业进行工程实践训练的时间累计不少于 1 年。其中，大四下学期在企业进行为期半年的毕业设计，并且从大一开始，利用每年的假期在企业进行专题工程实训，累计超过半年时间。在校学习期间，部分课程由企业工程师参与讲授，在校进行的项目训练选题来自于企业，并由企业参与成绩评价。

在学生培养的整个过程中，采用特别设计的含 CDIO 全过程的项目将所学课程串联起来，加强工程项目构思、设计、实现和运作能力的培养和训练。在高年级期间，则通过综合性的项目训练学生综合运用所学知识，创新性的解决工程实际问题的能力。

充分利用武汉光电国家研究中心以及光学与电子信息学院的多学科创新平台、校企合作渠道和国际交流机会，以及师资队伍构成多样化的特点，培养学生自主创新、主动实践、团队协作和多学科交叉能力，以及国际视野和跨文化交流能力。

重视拔尖学生的个性特质，结合相关企业对人才技能的特殊需求，由学业导师和企业导师为学生量身定制个性化的理论、实验和实践训练内容。

Instruction: encourage students to be self-learning, initiative-practice, innovation dedicative, and aiming for excellence. To establish a solid foundation in math-physics, broaden the subject groundings with inter-discipline development in Science and Engineering, interact between academy and industry, and to develop independent individuality for R&D.

The students are selected from fresh undergraduates university wide, 30 students per grade. A 4+2 program will be applied including 4 years' undergraduate study and 2 years' master of engineering study. During the undergraduate, it will follow 3+1 program in which students are required to conduct at least 1 year internship in industry for engineering practice. A CDIO featured specially designed program will be used to enhance the capability of problem solving for advanced engineering application in optoelectronics domain.

The research platform in the university including Wuhan National Laboratory for Optoelectronics and School of Optical and Electronic Information will be fully utilized for the education and training, to provide world class advisor and international exchange opportunity.

Academic supervisor and industry advisor will work together to facilitate efficient personal training process for students.

三、培养特色

III. Program Highlights

以培养工学博士为目标，衔接本科教育阶段。以电子、光电子芯片和器件的设计与制造为核心，以系统应用为方向，构建核心课程群为主体、个性化多元选择课程为辅的课程体系，遵行“群体培养与多元发展相统一、工程实践与科学思维相统一”的人才培养理念，坚持多学科交叉培养、个性化、小班化、国际化、导师制的培养特色，整个本科阶段，导师指导不断线，理论学习不断线，科研实践不断线。

实施“2+1+1+X”的过程培养模式。前二年，按照光电信息大类，推行创新素质教育；第三年，通过专业分流进入自主选择的专业进行学习（光电信息学院的四个专业均可以选择）；第四年，作为本科和研究生衔接阶段，除了按照培养计划要求继续修读本科课程以外，还可以修读部分研究生课程。第五年，可以开始研究生阶段学习。渐进式培养过程中，实行竞争分流和阶段之间有机衔接，本硕连读，并优先推荐免试攻读博士学位。

This program is the undergraduate stage of cultivating engineering doctor. The talent ability training focuses on the design and manufacture of electronic and/or optoelectronic chips and devices, and is oriented by their applications in optical and/or electronic systems. The curriculum is based on the core courses group, supplemented by personalized and diversified courses. Talent training follows the concept of “the unity of group training and diversified development, the unity of engineering practice and scientific thinking”. This program implements a multi-disciplinary, personalized, small-class, international and mentor-led training system. Mentor guidance, theoretical study and scientific research Practice will run through the entire undergraduate stage.

The process culture mode of “2+1+1+X” is adopted. In the first two years, we will implement innovative quality education in accordance with the Optical and electronic information classes. In the third year, students will enter the majors of their own choice through major diversion (all the four majors of the Optical and electronic information classes can be choosed). In the fourth year, as the connecting stage of undergraduate and graduate student, in addition to continuing to study undergraduate courses according to the requirements of the training plan, you can also study some graduate courses. In the fifth year, you can begin your doctoral study. In the process of progressive training, competitive diversion and effective linkage between stages will be implemented. Students will continue to study for undergraduate and master's degrees, and give priority to the test-free recommendation to study for a doctorate.

工程科学学院

根据中华人民共和国国家外国专家局《高校国际化示范学院推进计划》（以下简称推进计划）精神，经华中科技大学学术委员会讨论、校党委常委会研究决定依托武汉光电国家研究中心（原武汉光电国家实验室（筹））成立工程科学学院。

当今的工程行业需要通过广泛领域的科学研究和创新得到现实问题的解决方案，比如太阳能电池和机器人技术。针对本科教育中工程专业面通常较窄的现状，为了适应科技发展中学科交叉的需要，学院致力于培养具有多学科视野、扎实的科学和工程基础知识、国际竞争力和领导能力的工程领域的科学与技术人才。

学院坚持学科交叉、关注个性、小班教学的指导思想，引进国际高水平师资，采用国际先进教学管理模式，建立国际化教学实验区，采用电子信息类基础课程与光电、生物医学等方向融合的特色培养方案，全程进行导师跟踪制，在高年级阶段进行海外项目训练，并优先考虑免试推荐攻读研究生。毕业生今后能够在生物医学工程领域继续深造，成为科学界未来的拔尖人才；或在产业部门从事设计与研发等工作，成为工程领域的精英之才。

In order to achieve the educational objectives of high-end talents of cyberspace security, the school gives full play to the roles of the software and hardware facilities of the National Cybersecurity Talent and Innovation Base, coordinates the educational resources, and builds the integrated education model of “two sites for one school, phased implementation and multipartite coordination” together with the School of Cyberspace Science and Engineering of Huazhong University of Science and Technology (HUST).

基于本学科的特点，紧密结合华中科技大学多学科的支撑优势，以及基地企业密集优势，形成“一院两地”的办学架构。

Considering the essential characteristics of this discipline, the School of Cyber Science and Engineering establishes the educational framework of “two sites for one school” by close integration with the advantages of multidisciplinary support of HUST as well as the intensive practice of the National Cybersecurity Talent and Innovation Base.

学生进校后实施 2+2 的分段培养模式，即本科 2 年在学校本部学习，2 年在基地学习与实践；该模式一方面以华中科技大学学校本部为核心，重点进行基础理论与专业核心理论的培养，学生能够掌握相关的学科专业知识，并根据兴趣选修交叉学科知识，具备初步的网络安全实践能力；另一方面，通过基地建立的华中科技大学网络安全人才实践培养中心，和网络空间安全专业培养专职与兼职相结合的师资队伍，联合基地网络安全企业，进一步加强学生实践能力培养。

The ideas are detailed as follows: given the interdisciplinary features of cyberspace security, the phased education model will be applicable to students after enrolment, which means 2+2, that is, 2 years for learning on campus and 2 years for learning and practice in the base; this model, on the one hand, focuses on basic theories and core theories of the specialty on campus of HUST, elects interdisciplinary knowledge students feel interested in, and masters certain practical abilities and practice of cybersecurity; on the other hand, a cyber-security talent practice and education center is established in the National Cybersecurity Talent and Innovation Base with a team made up of full-time and part-time teachers for the cyberspace security education, and works together with cyber security enterprises in the base to promote the construction of practical courses.

“多方协同”是指在国家、基地与学校鼎力协同支持下，完成最终培养目标。国家层面由中共中央网络安全和信息化委员会办公室协调，在教育部招生措施，招生指标方面重点支持，同时大力协调学院建设经费，满足培养过程需要；基地提供学院物理办学空间，协调基地相关企业建立学生企业导师以及实践基地；华中科技大学则作为培养人才核心基础，提供全方位的师资、教材和配套管理等资源，“多方协同”确保实现培养满足国家需求的网络空间安全人才目标。

“Multipartite coordination” refers to the accomplishment of the ultimate educational objectives under the coordinated support of the county, the base and the school for talent education of the School of Cyberspace Science and Engineering. From the perspective of the country, the Office of the Central Cyberspace Affairs Commission coordinates key support for enrolment measures and quota from the Ministry of Education, and vigorously coordinates the funds for the school construction to meet educational needs; the base should provide the physical space for talent education and coordinates the establishment of enterprise-based supervisors and practice base for students; HUST, as the core foundation for talent education, should provide all-around resources such as teachers, teaching materials and management. The “multipartite coordination” will be conducive to achieving the educational objectives of cyberspace security talents catering for the national needs.

三、培养模式与特色

III. Teaching Model and Characteristics

(一) 培养模式 Teaching Model

为实现网络空间安全学科高端人才培养目标，充分发挥“国家网络安全人才与创新基地”（以下简称“基地”）软硬件设施作用，建立“一院两地、分段实施，多方协同”综合培养模式。

In order to achieve the educational objectives of high-end talents of cyberspace security, the school gives full play to the roles of the software and hardware facilities of the National Cybersecurity Talent and Innovation Base, coordinates the educational resources and builds the integrated education model of “two sites for one school, phased implementation and multipartite coordination” together with the School of Cyberspace Science and Engineering of Huazhong University of Science and Technology (HUST).

基于本学科的特点，紧密结合华中科技大学多学科的支撑优势，以及基地企业密集优势，形成“一院两地”的办学架构。

Considering the essential characteristics of this discipline, the School of Cyber Science and Engineering establishes the educational framework of “two sites for one school” by close integration with the advantages of multidisciplinary support of HUST as well as the intensive practice of the National Cybersecurity Talent and Innovation Base.

学生进校后进行实施 2+2 分段培养模式，即本科 2 年在学校本部学习，2 年在基地学习与实践；该模式一方面以华中科技大学学校本部为核心，重点进行基础理论与专业核心理论的培养，

学生能够掌握相关的学科专业知识，并根据兴趣选修交叉学科知识，具备初步的网络安全实践能力；另一方面，通过基地建立的华中科技大学网络安全人才实践培养中心，和网络空间安全专业培养专职与兼职相结合师资队伍，联合基地网络安全企业，进一步加强学生实践能力培养。

The ideas are detailed as follows: given the interdisciplinary features of cyberspace security, the phased education model will be applicable to students after enrolment, which means 2+2, that is, 2 years for learning on campus and 2 years for learning and practice in the base; this model, on the one hand, focuses on basic theories and core theories of the specialty on campus of HUST, elects interdisciplinary knowledge students feel interested in, and masters certain practical abilities and practice of cybersecurity; on the other hand, a cyber security talent practice and education center is established in the National Cybersecurity Talent and Innovation Base with a team made up of full-time and part-time teachers for the cyberspace security education, and works together with cyber security enterprises in the base to promote the construction of practical courses.

“多方协同”是指需要在国家、基地与学校鼎力协同支持下，完成最终培养目标。国家层面由中共中央网络安全和信息化委员会办公室协调，在教育部招生措施，招生指标方面重点支持，同时大力协调学院建设经费，满足培养过程需要；基地提供学院物理办学空间，协调基地相关企业建立学生企业导师以及实践基地；华中科技大学则作为培养人才核心基础，提供全方位的师资、教材，和配套管理等资源，“多方协同”确保实现了培养满足国家需求的网络空间安全人才目标。

“Multipartite coordination” refers to the accomplishment of the ultimate educational objectives under the coordinated support of the county, the base and the school for talent education of the School of Cyberspace Science and Engineering. From the perspective of the country, the Office of the Central Cyberspace Affairs Commission coordinates key support for enrolment measures and quota from the Ministry of Education, and vigorously coordinates the funds for the school construction to meet educational needs; the base should provide the physical space for talent education and coordinates the establishment of enterprise-based supervisors and practice base for students; HUST, as the core foundation for talent education, should provide all-around resources such as teachers, teaching materials and management. The “multipartite coordination” will be conducive to achieving the educational objectives of cyberspace security talents catering for the national needs.

III. Teaching Model and Characteristics

1. 培养模式

1. Teaching Model

为实现密码科学与技术高端人才培养目标，充分发挥“国家网络安全人才与创新基地”（以下简称“基地”）软硬件设施作用，建立“一院两地、分段实施，多方协同”综合培养模式。

In order to achieve the goal of training high-end talents in cryptography science and technology, give full play to the role of the software and hardware facilities of the “National Cyber Security Talent and Innovation Base” (hereinafter referred to as the “base”), and establish a comprehensive training of “one hospital, two places, implementation in stages, multi-party coordination” mode.

基于本学科的特点，紧密结合华中科技大学多学科的支撑优势，以及基地企业密集优势，形成“一院两地”的办学架构。

Based on the characteristics of this discipline, closely combining the multidisciplinary support advantages of Huazhong University of Science and Technology and the intensive advantages of base enterprises, a school-running structure of “one college and two places” is formed.

学生进校后实施 2+2 的分段培养模式，即本科 2 年在学校本部学习，2 年在基地学习与实践；该模式一方面以华中科技大学学校本部为核心，重点进行基础理论与专业核心理论的培养，学生

能够掌握相关的学科专业知识，并根据兴趣选修交叉学科知识，具备初步的网络安全实践能力；另一方面，通过基地建立的华中科技大学密码人才实践培养中心，和密码专业培养专职与兼职相结合的师资队伍，联合基地网络安全企业，进一步加强学生实践能力培养。

After entering the school, students implement the 2+2 segmented training model, that is, undergraduate study in the school headquarters for two years, and two years of study and practice in the base. On the one hand, this model centers on the school headquarters of Huazhong University of Science and Technology, focusing on basic theories and majors. For the cultivation of core theories, students can master relevant professional knowledge, select interdisciplinary knowledge based on their interests, and have preliminary network security practice capabilities; on the other hand, the cryptographic talent practice training center established by the Huazhong University of Science and Technology and the cryptography major, cultivate a team of full-time and part-time faculty members, and unite base network security companies to further strengthen the training of students' practical ability.

“多方协同”是指在国家、基地与学校鼎力协同支持下，完成最终培养目标。国家层面由中共中央网络安全和信息化委员会办公室协调，在教育部招生措施，招生指标方面重点支持，同时大力协调学院建设经费，满足培养过程需要；基地提供学院物理办学空间，协调基地相关企业建立学生企业导师以及实践基地；华中科技大学则作为培养人才核心基础，提供全方位的师资、教材和配套管理等资源，“多方协同”确保实现培养满足国家需求的密码人才目标。

“Multi-party coordination” refers to the completion of the final training goal with the support of the country, bases, and schools. The national level is coordinated by the Central Cyberspace Administration of China, with key support in the enrollment measures and enrollment indicators of the Ministry of Education. At the same time, it vigorously coordinates the construction of the college to meet the needs of the training process; the base provides the college physics school space, and coordinates the base-related enterprises to establish student business mentors and practices base; Huazhong University of Science and Technology serves as the core foundation for cultivating talents, providing a full range of resources such as teachers, teaching materials and supporting management, and “multi-party collaboration” ensures that the goal of cultivating cryptographic talents that meets the needs of the country is achieved.
